

DEMAYNE GOVENDER

Full Stack Software Engineer

Johannesburg, South Africa | 069 356 3459 | govender.demayne@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven Full Stack Software Engineer with experience delivering production-grade web applications, RESTful APIs, and enterprise automation systems across the full software development lifecycle (SDLC). Proficient in the MERN stack (MongoDB, Express.js, React, Node.js), TypeScript, Python, and cloud platforms including Microsoft Azure (AZ-900 Certified). Proven track record of engineering high-impact solutions — reducing manual payroll processing by 85%, improving RPA system reliability from 70% to 99.7% uptime, and deploying 15+ production applications. Ranked #1 in class (99% average) across an intensive full-stack engineering programme. Actively seeking a software engineering role to contribute across front-end, back-end, and cloud infrastructure.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, SQL, HTML5, CSS3, Bash/Shell

Frontend: React, Next.js, Redux, Tailwind CSS, Bootstrap, Framer Motion, Responsive Design

Backend: Node.js, Express.js, RESTful API Design, Microservices Architecture, JWT Authentication, OAuth 2.0

Databases: MongoDB, MySQL, PostgreSQL, Relational Schema Design, ORM

Cloud & DevOps: Microsoft Azure (AZ-900 Certified), Docker, CI/CD Pipelines, Git, GitHub, Vercel, Linux/Unix

Testing: Jest, Cypress, Pytest, Test-Driven Development (TDD), Unit & Integration Testing

Automation & RPA: Automation Anywhere (Certified), UiPath, Python Scripting, Process Automation

Practices: Agile/Scrum, SOLID Principles, SDLC, Code Review, DevOps, Technical Documentation, Stakeholder Communication

Tools: Postman, Webpack, VS Code, npm, Figma

WORK EXPERIENCE

Technical Operations Analyst (Logistics & Invoicing)

Barnes Black Logistics

October 2024 – Present

Johannesburg, South Africa

- Identify and scope technical automation opportunities across logistics and supply chain workflows, translating operational pain points into structured software engineering requirements and process improvement initiatives.
- Manage and optimise high-volume data workflows for 50+ daily shipments, applying data-driven analysis to maintain a **99.5% on-time delivery rate** and **100% billing accuracy**.
- Produce detailed technical documentation and business process maps for prospective automation systems, demonstrating ongoing application of software engineering methodologies outside a formal developer role.
- Actively developing side projects and open-source contributions (see Projects section) to maintain and grow full-stack development skills throughout this period.

Junior Software Developer

CIBA Industries

August 2023 – December 2023

South Africa

- Engineered an automated Timesheet Email Processing System using Python and Automation Anywhere, reducing manual payroll processing by **85%** and cutting processing time from 4+ hours to **under 5 minutes**.
- Developed a Python parsing algorithm with **99.9% accuracy** that eliminated human error and reduced payroll discrepancies by **95%** — tested using Pytest-driven unit test suites.
- Optimised RPA infrastructure end-to-end, increasing system uptime from **70% to 99.7%** and reclaiming **20+ engineering hours** per week for higher-value development work.
- Delivered solutions across the full SDLC — from requirements gathering and technical specification through to development, testing, and production deployment in an Agile/Scrum environment.

- Collaborated with cross-functional stakeholders to define KPIs, present progress updates, and validate measurable business impact at sprint reviews.

PROJECTS

Credential Management System · *React, Node.js, Express.js, MongoDB, JWT, Jest* | [View on GitHub](#)

- Built a secure full-stack platform for organisations to manage system credentials with role-based access control (RBAC), encryption at rest and in transit, and a RESTful API supporting full CRUD operations.
- Implemented JWT-based authentication and session management following OWASP security best practices; covered core logic with Jest unit and integration tests.

Database Project Management System · *React, Node.js, MySQL, Relational Architecture, Jest* | [View on GitHub](#)

- Developed a production-ready CLI project management tool for construction companies, supporting management of projects, contractors, clients, deadlines, and financial records.
- Engineered a normalised relational database schema ensuring data integrity across complex multi-entity queries; implemented a multi-layered architecture separating database, repository, and presentation concerns (SOLID principles).

Professional Portfolio Website · *React, Next.js, Tailwind CSS, Framer Motion, Vercel* | [View Live](#)

- Designed and deployed a responsive portfolio site using Next.js and Tailwind CSS, with page transitions and micro-animations via Framer Motion — live on Vercel with CI/CD via GitHub Actions.

EDUCATION & CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900)

March 2026

Microsoft Azure

Cloud Concepts · Core Services · Security · Compliance · Pricing

Robotic Process Automation Professional

November 2023

Automation Anywhere

Enterprise RPA Design, Development & Deployment

Full-Stack Web & Software Engineering

June 2024 – November 2025

HyperionDev (Bootcamp) | [View Portfolio](#)

Ranked #1 in Class · 99% Average

- Built and deployed 15+ production-ready full-stack applications using MERN stack, Python, and Java across the full SDLC.
- Engineered scalable microservices architectures with JWT authentication, RBAC, and concurrent user request handling.
- Implemented machine learning pipelines (Python, scikit-learn, pandas) achieving a 20% improvement in model accuracy.
- Applied TDD (Jest, Pytest), CI/CD pipeline construction, Git version control, and Agile/Scrum throughout all projects.

Software Engineering

June 2023 – June 2024

HyperionDev (Bootcamp) | [View Portfolio](#)

Ranked #2 in Class · 99% Average

- Completed foundational software engineering training with a focus on Python, Java, and object-oriented programming principles.
